

ASPHALT PAVING PROCESS

1 Plan the Project

Assess site conditions and traffic needs before paving begins.

2 Prepare the Site

Remove old materials and stabilize the soil foundation.

3 Build the Base

Install and compact aggregate for strong support.

4 Choose Materials

Select the right asphalt mix based on site and traffic needs.

5 Install Asphalt

Install and compact asphalt for a smooth surface.

6 Finish Edges

Seal joints and edges to protect the pavement.

7 Final Touches

Compact the surface and complete the final striping.
